Will AI Replace Software Engineers?
Scroll through social media long enough and you'll hear the same line on repeat "AI is going to replace software engineers." Most of the time, these claims don't even come from people in the industry. They're just repeating what they've heard from others.But here's the truth those of us who actually use AI tools while building projects see a very different picture.
Read more →
How it started vs.how it's going
I was never the typical "tech guy." If I counted all the computer games I've played, I'd barely fill one hand. My interests always leaned toward math, physics, and figuring out how things work.I wasn't brilliant at any of these subjects, but they genuinely excited me there's something addictive about understanding why complex systems tick the way they do. Life took me down various paths, and eventually I circled back to computer science after more than ten years away from it. What caught me off guard was how natural it felt to return. The same curiosity
that used to drive me through math problems and physics concepts now lights up when I'm working through algorithms or understanding how systems

About
About me
About me
Hi, I'm Vishal Sudasinghe, a Computer Science student at the University of Westminster with a growing passion for building clean, interactive, and user friendly web applications. I'm still new to this industry, and that curiosity pushes me every day. I love exploring new technologies, frameworks, design patterns, and anything that lets me turn a simple idea into a real product. I get tired of boring UIs so I challenge myself to make every project engaging, creative, and meaningful. For me, coding isn't just about writing functions or completing assignments. It's about crafting digital experiences that feel alive. When someone interacts with something I built and enjoys it, that's the moment I feel like all the effort was worth it. Of course, I'm still learning. Some theoretical concepts will come and go, get stuck, frustrate me...
But the excitement of creating something visually appealing and functional that feeling always stays. It reminds me why I started this journey. I believe technology should be simple, aesthetic, and human-centric. I want to build products that people love using not because they have to, but because they want to. This is just the beginning for me. Every project is a new opportunity. Every bug is a new lesson. And every line of code brings me closer to the developer I want to become. I'm growing with purpose and I'm excited to see how far I can take this. I'm not afraid to experiment, break things, and rebuild them better. Creativity excites me. Challenges shape me. And every small win reminds me that progress is happening even when I don't notice it. One day, I want to look back at this exact moment and say, "That spark… that hunger to create, that's what built my career." So here I am learning, building, and dreaming big. Not perfect. Not experienced. Just passionate and moving forward with purpose.

3. Diary

26/ 09/ 2025 - 10:01 am

Designing is something that I am truly passionate of, so started this project with a lot of energy. For the past six months, I have been doing on several full design projects most of which were based on my client's opinions. This time however I wanted to try something different, using only a minimal color pallet. In this design , I chose just black and white to create the notebook like feeling.

When I begin working on a design I can go the entire day without even looking at the clock,completely immersed until I come up with something atleat close to the idea I have in my mind.After two hours of focused work, this is the desigh I created. (I know that this will change atleat 5 times when I'm coming up with the last design.)

27/ 09/ 2025 - 9:20 am

Today I began working on the coding aspect of the project. The main challenge I encountered was adapting back to standard CSS, as I've primarily using Tailwind CSS for a long time. This transition initially caused some confusion, particularly when I mistakenly expected classes like bg-gray-100 to work in plain CSS.
For the design, my objective was to create a clean yet dynamic interface, to achieve this,

- I incorporated an emoji that changes its angle on hover, adding an interactive element.
- The typography was styled using Roboto Mono and Alfa Slab One.
- The navigation bar was positioned using flex-end property.
- Social media icons were arranged through combination of margins and flex layout.
  The emoji was placed using absolute positioning.
- To maintain the sharp and minimal look, I intentionally avoided using border-radius.

29/ 09/ 2025 - 7:30 am

After reviewing the coursework specification, I realized that the previously designed project page need some modifications to align the design more closely with standard practices, I restructured the page to resemble a typical events page.

Key improvements included :

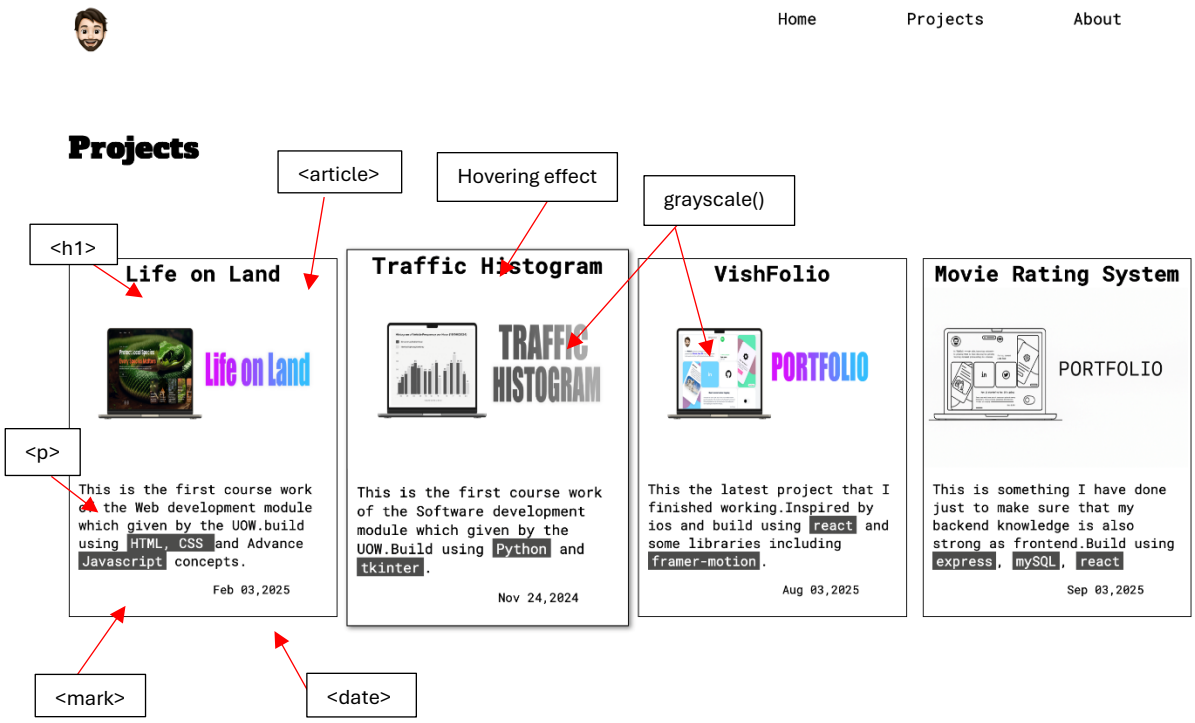
- Replacing generic elements with semantic HTML elements such as **<article>, <section>, <mark>** and **<date>** for better readability and accessibility.

Using **<figure>** and **<figcaption>** to store and describe project images, ensuring that both content and structure adhere to semantic conversions.

At first I was quite confused about why we are encouraged to use semantic elements like <section> and <article> when ** ** appears to serve the same purpose visually. After spending some time exploring this with ChatGPT, I realized that although these elements behave similarly in terms of layout, real importance lies beyond the appearance.

Semantic elements provide meaningful structure to the document, malign it easier for browsers, screen readers, and search engines to interpret the content accurately. This is not only improves accessibility and SEO but also enhance the maintainability of the code by clearing defining the purpose of each section.

In conclusion, the use of semantic elements adds significant value by improving both the usability and the overall quality of a webpage.



30/ 09/ 2025 - 9:30 am

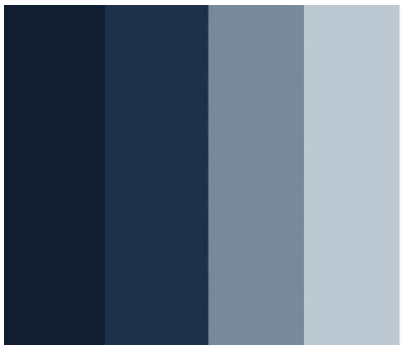
Today I started working on the footer design, Since the website only consist of three pages,there was no need to include a full site map as typically seen in larger websites. Instead, I designed a simpler yet visually appealing footer.

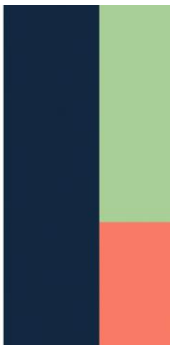
To enhance the appearance, I avoided using a solid black background and instead applied a black-to-gray gradient, which creates a smoother and modern visual effect**.**

04/ 10/ 2025 - 3:00 am

After reviewing several professional level websites, I realized that my portfolio needed some significant improvements. The first major change I made was selecting a dark yet visually appealing color theme to give the entire website a more modern and polished look. Additionally, I enhanced the About page adding a form.

```
--charcoal: #111827ff;
  --steel: #1f2937ff;
  --slate: #374151ff;
  --cool-gray: #9ca3afff;
  --off-white: #f9fafbff;
  --oxford-blue: #1b263bff;
  --purl-orange: #f1856f;
  --matte-green: #afd2a2;
```

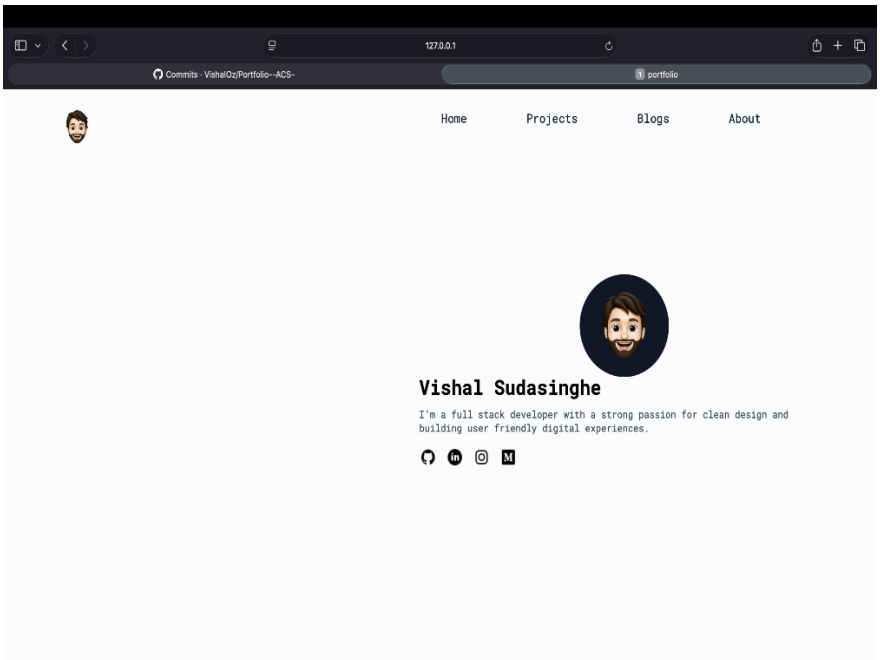




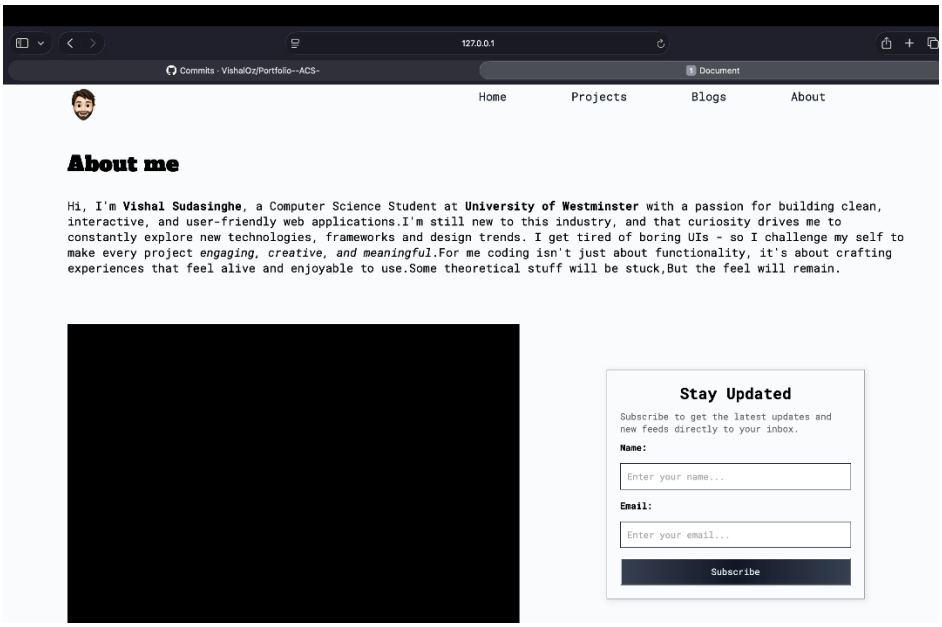
05/ 10/ 2025 - 2:30 am

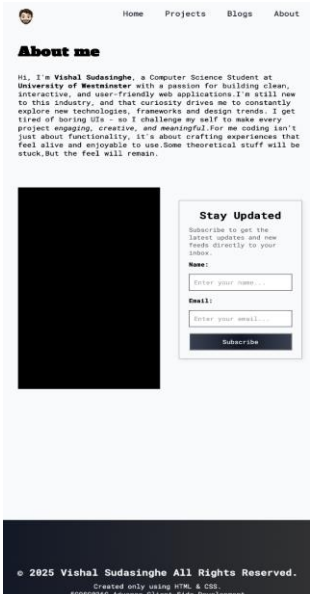
After drawing inspiration from the website reviewed on the previous day, I refined several aspects of the design. Additionally, I implemented fully mobile responsiveness across the Home, Project, and About pages to ensure optimal performance and accessibility on various screen sizes.

Home Page

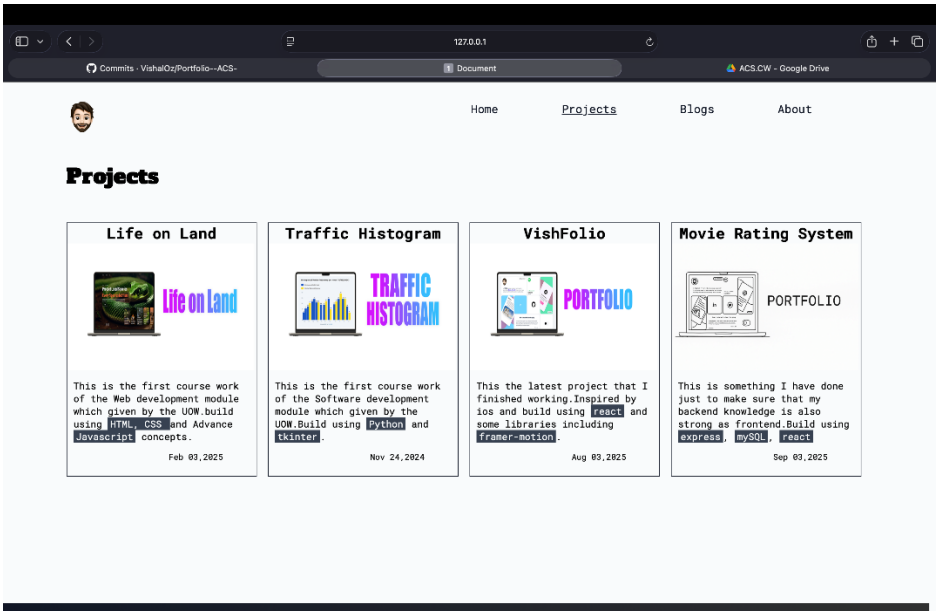


About Page





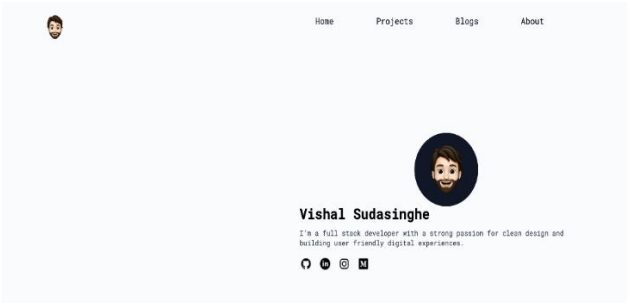
Projects Page

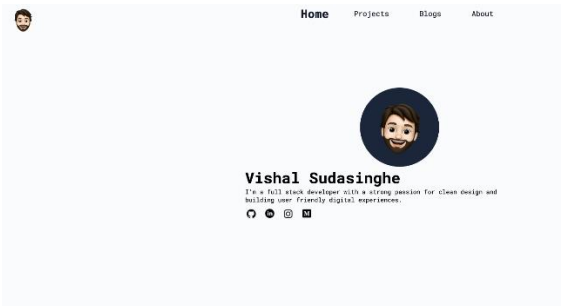


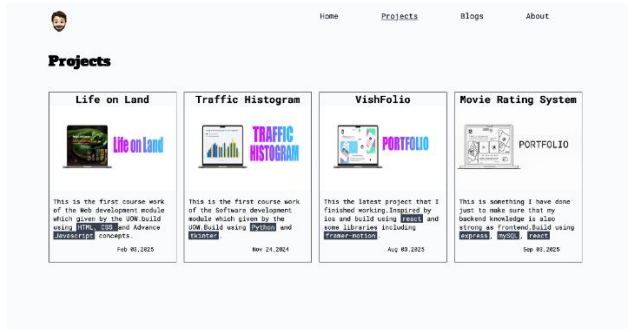
26/ 10/ 2025

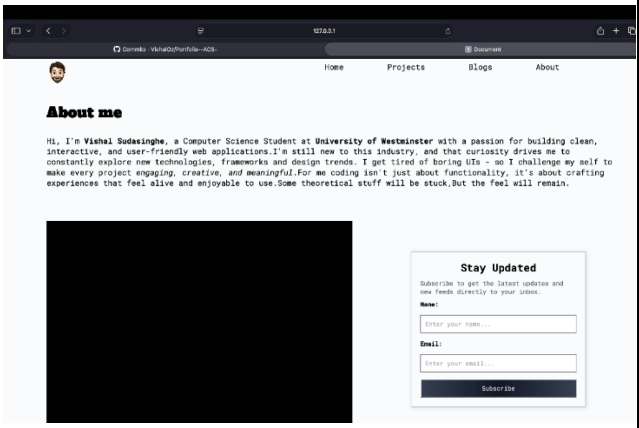
Today I reviewed my previous implementation and identified a major design issue , I had used hard coded pixel values throughout the stylesheet. This is approach caused layout inconsistence across different screen sizes, negatively affecting responsiveness. To resolve this, I systematically replaced every pixel values with scalable units such as rem, ensuring more flexible and accessible design structure.
And I made some design changes too.

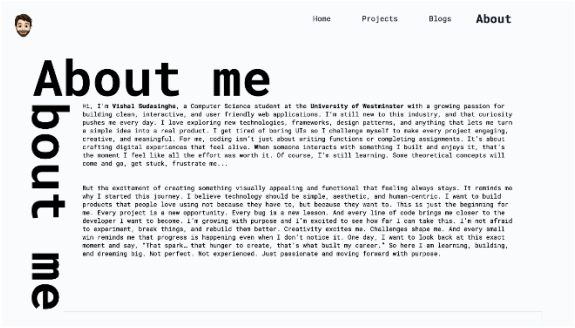
Before	After
		
	

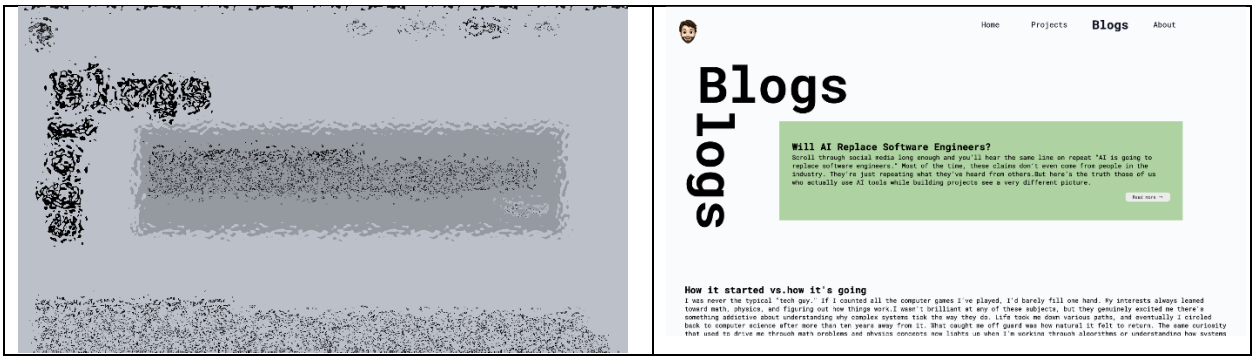










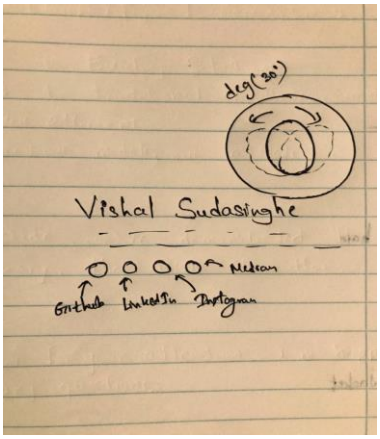


27/ 10/ 2025

After converting the style units, I built the entire website using rem units to achieve full responsiveness, I performed several viewpoint tests using browser developer tools to verify that the layout and the typography scaled appropriately across various devices and screen resolutions.

28/ 10/ 2025

On this day, I enhanced the website by adding new UI components, including three interactive blog cards and subtle animations(Emoji animation in the home page). These additions were made the project requirements stated in the coursework specification and to improve use engagement and overall visual appeal.



30 / 10/ 2025

I refined the website's structure by removing unnecessary standalone form pages . Instead, I integrated the form section into the exiting "About" page. This modification simplified the site's navigation flow and reduced redundancy, resulting in a cleaner and more user-friendly interface.

31 / 10/ 2025

I conducted formal HTML and CSS validation using the W3C Validator to ensure code quality and compliance with web standards. Several syntax errors and minor warnings were identified and corrected. I also documented the validation results and included screenshots of the validation reports as evidence in the final project documentation. (5. Code validation)

01 / 11/ 2025

Today I finalized the entire project, performing a final quality assurance check to confirm that all functionalities, animations, and responsiveness were working as expected, then I updated the version history and development log in the report to reflect the complete progression of the report.

4. CSS Implementation

You are required to use the following:

1. ~~Specify font(s) to be used throughout the site and in more specific areas, using either @font-face or google fonts~~
2. ~~Colors (including at least one semi-transparent)~~
3. ~~Shadows~~
4. ~~Text effects~~
5. ~~Attribute selectors (minimum 2)~~
6. ~~Pseudo elements with **generated content** in at least one place on your site~~
7. ~~User action pseudo class~~
8. ~~Child combinator~~
9. ~~Structural selectors~~
10. ~~Negation pseudo class~~
11. ~~Nth pseudo class~~
12. ~~Validity pseudo class~~
13. ~~Relational selector~~
14. ~~Border~~
15. ~~Rounded corners (can be of size 0 if you do not wish to have rounded corners)~~
16. ~~Gradient~~
17. ~~Transforms~~
18. ~~Transitions~~
19. ~~Animations~~
20. ~~Show that you have taken specificity into consideration~~

Provide good comments and indentation

Imported Roboto-Mono, Alfa-Slab, Bebas fonts

```
@import
url('https://fonts.googleapis.com/css2?family=Bebas+Neue&family=Roboto+Mono:ital,wght@0,100..700;1,100..700&family=Space+Grotesk:wght@300..700&display=swap');
@import
url('https://fonts.googleapis.com/css2?family=Alfa+Slab+One&family=Bebas+Neue&family=Roboto+Mono:ital,wght@0,100..700;1,100..700&family=Space+Grotesk:wght@300..700&display=swap');
```

Used Shadows in Projects page

```
 .projectsSec:hover,
 .projectsSecMain:hover {
   box-shadow: 0 4px 8px rgba(0, 0, 0, 0.2);
   cursor: pointer;
   transform: scale(1.02);
   transition: transform 0.3s ease, box-shadow 0.3s ease;
 }
```

Attribute Selectors,

```
.subscribeForm input[type="text"],
.subscribeForm input[type="email"],
.subscribeForm input[type="textfield"] {
    padding: 1rem;
    border: 0.1px solid var(--charcoal);
    font-size: 1rem;
    outline: none;
}
```

Structural Selectors,

```
.projectsSecCont > article:first-child {
    border: 1px solid var(--off-white);
    padding: 2rem;
}
.projectsSecCont > article:last-child {
    border: 1px solid var(--off-white);
    padding: 2rem;
}
```

Pseudo-elements with generated content

```
.buttonCont button::after {
    content: ' →';
    position: relative;
    left: 0;
    transition: left 0.3s ease;
}
.buttonCont button:hover::after {
    left: 0.2rem;
}
```

User action pseudo class,

```
.subscribeForm input:focus {
   border: 0.2rem solid var(--charcoal);
}
.projectsSec:hover,
  .projectsSecMain:hover {
    box-shadow: 0 4px 8px rgba(0, 0, 0, 0.2);
    cursor: pointer;
    transform: scale(1.02);
    transition: transform 0.3s ease, box-shadow 0.3s ease;
  }
```

Validity pseudo class,

```
form:has(input:invalid) button {
   opacity: 0.5;
   pointer-events: none;
}

form:has(input:valid) button {
   opacity: 1;
   pointer-events: auto;
}
<form class="subscribeForm">
            <label>Name: </label>
            <input type="text" name="name" id="name" placeholder="Enter your name..." required/>
            <label>Email: </label>
            <input type="email" name="email" id="email" placeholder="Enter your email..." required/>
            <label>Message: </label>
            <input type="text" class="message" placeholder="We need your thoughts ..."/>
            <div class="conditionDiv">
               <input type="checkbox" id="checkBox" name="checkBox" />
               <label class="condition">I agree to receive emails from Vishal Sudasinghe </label>
            </div>
            <div class="radioDiv">
               <input type="radio" id="fan1" name="fan1" value="fan1" >
               <label>I'm a fan of Billie Eilish</label>
            </div>
            <div class="radioDiv">
               <input type="radio" id="fan1" name="fan1" value="fan1" >
               <label>I have a Dog.</label>
            </div>
            <button type="submit">Subscribe</button>
         </form>
```

Animations (@keyframes),

```
@keyframes tilt {
   0% {
      transform: rotate(10deg);
   }
   25% {
      transform: rotate(-10deg);
   }
   50% {
      transform: rotate(10deg);
   }
   75% {
      transform: rotate(-10deg);
   }
   100% {
```

```
      transform: rotate(10deg);
    }
}
```

Transforms,

```
nav ul li:not(.navLogo) a:hover {
    transform: scale(1.6);
    color: var(--cool-gray);
}
nav ul li a.active {
    transform: scale(1.6);
    font-weight: bold;
}
```

Gradient,

```
footer {
    width: 100%;
    background-image: linear-gradient(to right, var(--charcoal) , rgba(0, 0, 0, 0.8));
    padding: 2rem 0;
    text-align: center;
}
```

Border,

```
.subscribeForm input[type="text"],
.subscribeForm input[type="email"],
.subscribeForm input[type="textfield"] {
    padding: 1rem;
    border: 0.1px solid var(--charcoal);
    font-size: 1rem;
    outline: none;
}
```

Child combinator,

```
nav > ul > li > a{
    text-decoration: none;
    color: var(--charcoal);
    transition: transform 0.3s ease;
    display: inline-block;
}
```

Rounded corners,

```
border-radius: 8px
```

Specificity considered,

Many areas using > and element > class

Nth pseudo class,

```
.secondMainCont article:nth-child(3) {
    margin-bottom: 5rem;
}
```

Negation pseudo class,

```
.projectSecCont > article:not(.projectsSecMain) {
    border: 2px solid var(--slate);
}
```

   From line 61, column 21; to line 61, column 75
   `<input type="checkbox" id="checkBox" name="checkBox" />↵`
10. Info **Trailing slash on void elements has no effect and interacts badly with unquoted attribute values.**
    From line 87, column 21; to line 87, column 78
    `<img src="assets/github.png"  class="icon" alt="github" />↵`
11. Info **Trailing slash on void elements has no effect and interacts badly with unquoted attribute values.**
    From line 91, column 21; to line 91, column 81
    `<img src="assets/linkedin.png" class="icon" alt="linkedin" />↵`
12. Info **Trailing slash on void elements has no effect and interacts badly with unquoted attribute values.**
    From line 95, column 21; to line 95, column 83
    `<img src="assets/instagram.png" class="icon" alt="instagram" />↵`
13. Info **Trailing slash on void elements has no effect and interacts badly with unquoted attribute values.**
    From line 99, column 21; to line 99, column 80
    `<img src="assets/medium.png" class="icon" alt="instagram" />↵`

Document checking completed. No errors or warnings to show.

Used the HTML parser.

Total execution time 7 milliseconds.

https://validator.w3.org/nu/#file

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

Showing results for uploaded file index.html (checked with vnu 25.10.25)

Checker Input

Show ☐ source ☐ outline ☐ image report Options...

Check by file upload Choose File no file selected

Uploaded files with .xhtml or .xht extensions are parsed using the XML parser.

Check

Use the Message Filtering button below to hide/show particular messages, and to see total counts of errors and warnings.

Message Filtering

1. Info **Trailing slash on void elements has no effect and interacts badly with unquoted attribute values.**
   From line 6, column 5; to line 6, column 47
   `1.0"↵    <link rel="stylesheet" href="styles.css" />↵    <`
2. Info **Trailing slash on void elements has no effect and interacts badly with unquoted attribute values.**
   From line 14, column 21; to line 14, column 62
   `<img src="/assets/ogdo-2.png" alt="logo"/>↵`
3. Info **Trailing slash on void elements has no effect and interacts badly with unquoted attribute values.**
   From line 34, column 17; to line 34, column 74
   `<img src="assets/github.png"  class="icon" alt="github" />↵`
4. Info **Trailing slash on void elements has no effect and interacts badly with unquoted attribute values.**
   From line 38, column 17; to line 38, column 77
   `<img src="assets/linkedin.png" class="icon" alt="linkedin" />↵`
5. Info **Trailing slash on void elements has no effect and interacts badly with unquoted attribute values.**
